MARKET REVIEW

Stocks and bonds rallied in July. A perceived policy pivot from the US Federal Reserve (Fed) led markets to lower interest rate expectations, pricing in interest rate cuts from major central banks in early 2023. This supported risk assets and allowed investors to recoup some of their heavy year-to-date losses across both equities and bonds. Across Europe, ongoing fears of an energy supply cut-off from Russia led to a further spike in European gas prices, which hit €215/megawatt-hour intra-month. The US Fed and European Central Bank (ECB) delivered 0.75% and 0.50% interest rate hikes respectively as they sought to bring inflation back to their 2% targets. The euro fell below parity against the US dollar intra-month; risks to the eurozone economy were heightened by an ongoing weaponisation of Russian energy supplies and political uncertainty in Italy.

MARKET ROUND-UP

Equities

Over the month, the MSCI AC World equity index rose 7.1% (9.7% in euros). US equities outperformed, rising 9.3% (12.1% in euros), as falling bonds yields supported equity markets. The UK underperformed following several months of outperformance, rising 3.5% (6.4% in euros), as energy and commodity stocks were relatively weak as oil and commodity prices fell over the month. Japan rose 4.0% (8.4% in euros) as weakness in the Japanese yen supported equity markets. The Pacific Basin rose 2.8% (6.5% in euros) as weakness in commodity and energy prices led the region to underperform the broader market. European equities were strong, rising 7.0% (8.0% in euros), as the ECB unveiled its new anti-fragmentation tool.

Bonds

The Eurozone >5-year bond index rose 5.9% as yields fell on intensifying growth fears and comments from the US Federal Reserve (Fed) on slowing the pace of rate hikes. The German 10-year yield fell over 0.5%, ending the month at 0.82%. High yield corporate bonds rose 5.8% as yields fell 1.12% to 6.82%.

Currencies and commodities

The euro fell -2.5% against the dollar to 1.022 as risks to the eurozone economy were heightened by an ongoing weaponisation of Russian energy supplies and political uncertainty in Italy. Commodities were flat (2.5% in euros), bringing their year-to-date return to 35.7% (51.4% in euros). A fall in oil prices and broad-based weakness across many commodities was partly offset by a very sharp rise in European gas prices. Crude oil was down -6.8% amid slowing global growth, while European gas rose 32.1% as Russia cut supplies via Nord Stream 1. Pressure on food prices eased as Russia, Ukraine, the United Nations, and Turkey signed a deal to reopen three Ukrainian Black Sea ports – which have been closed since Russia's invasion in February – for grain. Gold fell -2.4% as risk appetite returned to markets following a perceived policy pivot by the US Fed.

MARKET OUTLOOK

Irish Life Investment Managers' (ILIM's) view – looking ahead

The outlook for equity markets over the next 12 months is dependent on several factors, including central bank policy, growth, inflation (both expected and realised) and the evolution of the Russia/Ukraine crisis.

Equities have declined year-to-date as central banks have tightened policy, bond yields have risen, and growth forecasts have fallen. Post the falls, equities now look attractive on an absolute valuation basis, trading on a 12-month forward price-to-earnings (P/E) multiple of 15.0x against a long-term average of 16.0x.

If consensus economic and earnings forecasts prove to be correct and we are just in a mid-cycle slowdown, there is double-digit upside in equity markets on a one-year view. A moderation in inflation with no additional policy tightening beyond what is currently discounted in markets would also be supportive.

However, equities continue to face several headwinds. Due to the persistence of high inflation, central banks continue to tighten policy and withdraw the policy accommodation that has been supportive of equity markets in recent years. Given the significant rise in bond yields, equities are no longer cheap on a relative valuation basis and are expensive on some measures versus bonds. Earnings are at risk of being downgraded due to margin pressures from input and labour costs.

For equities to begin to recover from their year-to-date falls, investors need to believe that we are at the peak of policy tightening and that growth risks are fading. Given the risks around inflation and central banks' policy responses, potential downside in growth and earnings forecasts, the failure to find resolutions to geopolitical issues and the removal of the undervaluation of equities versus bonds in the higher yield environment, we see risks in equities as still being skewed to the downside.

Navigating equity markets is difficult, even in a benign environment, but it has become more arduous in the current backdrop with heightened uncertainty on many issues. As a result, the increased volatility evident this year is likely to continue. While our outlook for equity markets suggests limited upside in the short term, the outlook remains positive over the medium to long term, with upside of approx. 5% per year expected on a 5-10-year view.

Outlook dependent on economic and earnings growth. Uncertainty evident post Russia's invasion of Ukraine. Monetary policy support is being removed at a faster pace than expected.

Global economy contracted in 2020 by -3.6% with a rebound of 6.0% in 2021. Growth of 2.6% is expected in 2022 post recent downgrades. Rising risks of a recession in 2023 given tighter monetary policy, high inflation, falling business and consumer confidence.

Russia/Ukraine, Covid-19, monetary policy tightening, fiscal stimulus, inflation developments, energy prices, energy supplies and supply chain issues will all be key for growth.

Equity valuations in absolute terms have fallen below long-term averages, although, when more realistic earnings growth assumptions are used, they are closer to the long-term average of 16.0x. Equities' relative undervaluation against bonds has been reduced with the rise in bond yields YTD.

Following the downgrades to growth forecasts, expected downward revisions to earnings and the rise in bond yields YTD, equity markets appear close to fair value with limited upside. Risks appear skewed to the downside.

Volatility likely to remain a feature due to uncertainty over impact of Russia/Ukraine crisis, risks around inflation, tighter monetary policy, slower growth, Covid variants and other geopolitical risks.

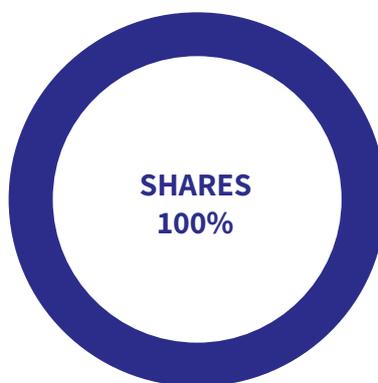

SUMMIT GLOBAL LEADERS FUND

The Summit Global Leaders Fund invests in stocks with large market capitalisations. From July 2014, equity management has been sub-advised to Setanta Asset Management.

Fund update for July

The Summit Global Leaders Fund returned 11.92%, net of fund management fee, over July. Growth names rebounded strongly as concerns eased around the extent of future interest rate hikes. Tesla rose +32.4% in local currency (lc) in the month. The company reported strong earnings growth in the second quarter despite lockdown-related disruptions to production in China, and management highlighted healthy demand for its electric vehicles. Amazon was up +27.1% (lc) in the period. It beat revenue expectations for the quarter driven particularly by the performance of its cloud computing business and offered an upbeat forecast for the remainder of the year. Relative laggards included Abbvie (-5.4% lc) and Intel (-2.9% lc). The former lowered sales guidance for 2022 as it reduced expectations for its cancer drug Imbruvica. Intel reported disappointing second-quarter results and cut its financial outlook for the rest of year. Management cited weakening economic conditions, supply chain disruptions and competitive pressures.
