MARKET REVIEW

MARKET ROUND-UP

Market Review

Global economic data was mixed in June, with a divergence between a resilient US economy and signs of slowing in the eurozone and China. The US Federal Reserve (Fed) paused its interest rate rises at the June meeting but guided to two further rate hikes later this year. The European Central Bank (ECB) increased rates by 0.25% and suggested another rise at the July meeting, and possibly more thereafter, amid sticky inflation. Global stock markets rallied strongly in June, with US stocks benefiting from a favourable economic backdrop and positive sentiment around artificial intelligence and its potential to improve corporate profit margins. Bond markets were close to flat, but government bond yields rose as further interest rate rises were priced in. The US dollar fell against the euro in June, giving back most of its gains in May, as the ECB was expected to raise interest rates at a faster pace than the Fed.

Equities

Global stock markets rose strongly in June. The MSCI All Country World index rallied by 5.5% (+3.4% in euros) over the month as stocks were supported by broadly resilient economic data and continued to benefit from positive sentiment around artificial intelligence (AI) and its potential to improve corporate profit margins.

This was especially the case in the US, as the MSCI USA rose by 6.7% (+4.2% in euros).

European ex-UK equities were up by 2.8% (2.7% in euros), while UK equities lagged, rising by 1.2% (+1.5% in euros) amid rising interest rates and concerns of recession.

Bonds

Bonds markets were close to flat in June, with the ICE BofA 5+ Year Euro Government bond index up by 0.1%. Government bonds yields moved higher as the prospect of further interest rate rises in the second half of 2023 was priced in: two-year US Treasury yields rose by 0.5% to 4.90%, while German two-year government bond yields were up by 0.48% to 3.20%.

MARKET SNAPSHOT

Market returns (EUR)

Equity Markets (EUR)	QTD Return (%)	YTD Return (%)	2022 Return (%)

MARKET OUTLOOK

Irish Life Investment Managers' (ILIM's) view – looking ahead

Global equities have proved resilient in the face of mounting headwinds, from lacklustre earnings to continued monetary tightening and banking crises. However, in our view, equities could be vulnerable to some short-term downside. Headwinds from slower growth in the second half of the year with lingering risks of a recession, monetary policy remaining restrictive for longer, reduced liquidity levels and a potential new round of downward revisions to earnings forecasts all could cause equities to retrace some of their recent gains.

Following the gains year to date, global equities appear slightly expensive, trading on a 12-month forward P/E multiple of 16.4x against a long-term average of 16.0x. The 12-month forward P/E for the MSCI USA is 19.7x against a long-term average of 17.1x. Equities outside the US offer better value. Europe ex-UK equities trade at a multiple of 12.8x against a long-term average of 13.1x, while emerging markets are trading at 12.1x versus a long-term average of 11.6x. Equities remain expensive against both bonds and cash given the high yields currently available. On balance, we believe there could be a better entry point for equities later this year.

Potential offsets to any short-term downside in equities would be: growth remaining positive and a soft landing for the economy, inflation falling faster allowing central banks to loosen policy earlier, the benefits from the application of AI accruing more quickly, and long-only institutional investors closing underweight equity positions.

The outlook for equities on a 12-month view remains positive. Once the question around slower growth or recession is resolved, central banks are likely to pivot towards looser policy in 2024 as inflation continues to fall. An anticipated rebound in earnings as growth recovers should also provide a tailwind while, over the medium term, the rollout of AI should boost efficiencies and earnings across the whole market. The ongoing green-related capex cycle could also boost earnings over the medium term.

Outlook dependent on economic and earnings growth. Uncertainty on growth due to rising rates, squeeze on real incomes, weaker business and consumer sentiment, slower lending post bank crisis.

Global growth slowed to an estimated 3.0% in 2022. Growth is forecast to decelerate further to 2.4% in 2023 with lower growth in developed markets and an improvement in emerging markets as China reopens. The jury is out on whether or not a recession will occur, although the impact of the US banking crisis has increased growth concerns due to fears over tighter lending conditions, while European and Chinese data has recently begun to ease.

The impact of rising interest rates, inflation developments and China's reopening will all be key for growth.

Equity valuations in absolute terms are now slightly above long-term averages, although earnings forecasts could still be vulnerable to further downside, meaning absolute valuations could be higher. Equities' relative undervaluation against bonds has been removed with the rise in bond yields.

Following lowered growth forecasts, expected downward revisions to earnings and the rise in bond yields, equities are still vulnerable to short-term downside before recovering.

Volatility likely to remain a feature due to uncertainty over eventual growth outcome, inflation path, tighter monetary policy, recent banking crisis and geopolitical events.

SUMMIT GLOBAL LEADERS FUND

The Summit Global Leaders Fund invests in stocks with large market capitalisations. From July 2014, equity management has been sub-advised to Setanta Asset Management.

Fund update for June

The Summit Global Leaders Fund returned 3.15%, net of fund management fee, over June. The leading performers in the fund were the automotive companies Tesla and Toyota. Tesla was up +28.4% (in USD) on optimism over vehicle deliveries and as General Motors, Ford, Volvo and Rivian signed deals to adopt the battery charging standard developed by the company. Toyota rose +21.0% (in JPY) in the period as management disclosed a number of new initiatives around next generation batteries and hydrogen technology. The worst performers over the month were pharmaceutical companies Roche (-5.1% in CHF) and Pfizer (-3.5% in USD). Roche presented data on a drug for liver and lung cancer which was seen by some as underwhelming. Pfizer announced the discontinuation of the development of a daily treatment for obesity and diabetes due to safety concerns.
