# MARKET REVIEW

## MARKET ROUND-UP

### Market Review

US Treasury yields continued to rise over October, even amid increased geopolitical uncertainty, and global bond indices were mixed. Global stock markets were also weaker, dragged down by rising bond yields and somewhat lacklustre third-quarter earnings. Strong US economic activity contrasted with mixed data in the Eurozone. Meanwhile, the Middle East conflict raised concerns over geopolitical tensions in the region and the potential for disruption to oil supplies.

### Equities

Global stock markets were weaker in October, dragged lower by rising nominal and real interest rates and somewhat lacklustre third-quarter earnings. The MSCI All Country World index fell by 2.7% (-2.8% in euros) over the month. The MSCI USA was down by 2.3% (-2.1% in euros), while European ex-UK equities fell by 3.3% (-3.4% in euros) amid a weak economic outlook.

### Bonds

Bond markets were mixed, with yields rising as central-bank rhetoric continued to emphasise higher interest rates for longer. High yields meant that the interest payments offset the price declines to some extent, and some indices managed to eke out a gain for the month. The ICE BofA 5+ Year Euro Government bond index was up by 0.2% over the month, with German 10-year yields falling slightly, to 2.81%, on the continued weak economic backdrop and falling inflation.

## MARKET SNAPSHOT

## MARKET OUTLOOK

### Irish Life Investment Managers' (ILIM's) view – looking ahead

Sovereign bond yields are broadly higher this year on the back of a slower-than-expected pace of moderation in inflation, resilient economic activity and an upward reset for the level and timing of peak policy rates. With inflation having clearly peaked and central banks now suggesting that the end of the cycle of interest rate rises is very close, bond yields are expected to decline over the next 12 months.

On a 12-month view, our base case is that German 10-year government bond yields fall from 2.81% at end-October to around 2.00%, and that the equivalent for the US fall from 4.93% to somewhere in the region of 4.00%. We believe fixed income offers a strong risk-reward profile at this stage in the cycle and is attractive from a wealth preservation perspective. The current relatively high levels of bond yields and central banks' commitments to bring inflation down mean bonds should remain attractive on a multi-year basis with high single-digit returns possible over the next 12 months in riskier segments of fixed income.

Global equities have proved resilient in 2023 as recession fears have receded and a peak in central bank interest rates has come into view.

While global earnings are forecast to be only modestly higher this year – by approximately 0.6% – they have held up better than feared at the start of the year as sales have surprised to the upside and the margin squeeze for corporates has been less than anticipated. Earnings are expected to grow by over 11% in 2024.

Global equity valuations are below long-term averages, trading on a 12-month forward price-to-earnings (P/E) multiple of 15.1x against a long-term average of 16.0x. However, equities remain expensive against both bonds and cash given the high yields currently available on these assets.

Despite equities appearing fully valued on a relative valuation basis, they are now trading attractively on an absolute basis, and the outlook on a 12-month view is positive. Central banks are likely to pivot towards looser policy in 2024 as inflation continues to fall. An increasing probability of a soft landing with a rebound in both growth and earnings in 2024 should also provide support. Over the medium term, the rollout of AI should boost efficiencies and earnings across the whole market and allow equities trade at higher valuation levels. The ongoing green-related capex cycle could also boost earnings over the medium term. Any short-term volatility in markets is likely to be offset by the above factors, resulting in positive returns on a 12-month time frame.

Equities are trading below long-term valuation multiples, although, given the high yields available on cash and bonds, no longer appear cheap against these assets.

Equities are again attractive on an absolute valuation basis and, with positive economic and earnings growth in 2024, can continue to grind higher. A continued fall in inflation, enabling central banks to cut interest rates in 2024 could contribute to additional gains in equity markets.

Increasing hopes of a 'soft landing' for the economy – the avoidance of a recession – have been supportive of equities. Global growth slowed to an estimated 3.0% in 2022. Growth is forecast to decelerate further to 2.5% in 2023 but remain positive at 2.1% in 2024, with a recession looking increasingly unlikely. The US economy has been more resilient while Europe has struggled as higher interest rates have impacted activity levels and demand.

After an initial reopening surge in Q1, Chinese growth stalled. The authorities have announced plans for additional stimulus to boost growth and recent data has begun to stabilise.

Structural long-term benefits from the generative AI theme and evidence of earnings being boosted by AI-related initiatives can also support higher equity valuation multiples.

Volatility is likely to remain a feature in markets due to uncertainty over the eventual growth outcome, the inflation path, monetary policy and geopolitical events. Modest short-term drawdowns are possible, which could provide opportunities to add to exposures.

# SUMMIT GLOBAL LEADERS FUND

The Summit Global Leaders Fund invests in stocks with large market capitalisations. From July 2014, equity management has been sub-advised to Setanta Asset Management.

## Fund update for October

The Summit Global Leaders Fund returned -2.14%, net of fund management fee, over October. Leading performers included Microsoft (+7.1% in USD) and Novo Nordisk (+5.1% in DKK). The former reported strong quarterly results with particularly impressive growth in its cloud computing business as it leveraged its investments in artificial Intelligence. Novo Nordisk has benefited from soaring demand for its obesity and diabetes drugs. Laggards included Tesla (-19.7% in USD) and Chevron (-13.6% in USD). Tesla warned that high interest rates are negatively impacting demand, while price cuts impacted profit margins in the latest quarter. Chevron's quarterly earnings fell short of analyst expectations, and there was some investor scepticism around its \$53bn takeover of US oil and gas producer Hess.
